PERSONAL PROJECTS

HealthCare – Web Application (2025)

HealthCare is an intelligent machine learning system that helps patients understand their symptoms and identify potential diseases based on the information they provide. Additionally, it features a real time doctor-patient chat implemented using socket communication enabling patients to consult doctors instantly for further advice or clarification.

Rent-Wheels – Web Application (2024)

Designed the UI/UX for a Car Rental System, focusing on streamlining the rental process through responsive layouts and a user-centered design approach to deliver an intuitive and engaging user experience.

Inventory Management System – Desktop Application (2024)

Inventory Management System an intelligent platform developed in Java that performs CRUD (Create, Read, Update, Delete) operations on inventory products. It efficiently manages and tracks all inventory transactions, ensuring accurate and up-to-date records of stock levels and product movements.

Dino Run Game – Desktop Application (2023)

A simple single player Dino Run game built using C++. The dinosaur jumps over obstacles and the game speed increases as the player scores more points.

Parking Management System (2022)

This system records the arrival and departure times of vehicles and departure time of vehicles and calculates the parking fee based on the time parked.
